

A photograph of a worker in a blue uniform standing next to a large, tilted metal basket filled with numerous small, rectangular metal parts. The worker is holding a tool, possibly a brush or a small container, and appears to be inspecting or cleaning the parts. The background shows industrial machinery and a blue structure. The entire image is overlaid with a blue gradient and white geometric shapes (arrows and lines) pointing towards the text.

OUR COMPETENCE. YOUR SUCCESS.

Mosdorfer Industrial

OUR EXPERIENCE. YOUR SUCCESS.

Mosdorfer's experience in forging technology has been shaping innovative products for more than 300 years.

Ever since visionary thinking in the field of forging and metal-processing techniques has been the focal point of our long-term success.

Today our technical competence combined with our innovative manufacturing technologies guarantee future-oriented fittings and damping systems for overhead transmission lines.

All over the world our products contribute to the safe and reliable energy transmission making us an important strategic partner of the global energy sector. Mosdorfer technology being applied in more than 1,000 projects globally - from the desert to the highest mountains - are obvious sign for technical competence and high product quality.

We know that the combination of our technical competence, high quality and reliability is your key to success.

Our manufacturing centers located in Weiz, Austria and Myjava, Slovakia, assure 17,000 m²

of advanced production technologies and processes. Equipped with latest manufacturing machinery that is operated by exhaustively trained and high-qualified personnel we deliver most efficient industrial solutions for your product requirements. Besides our expertise

in forging technology we offer advanced engineering solutions as well as high-end machining and galvanizing services. We are your partner for product applications in agriculture, automotive, energy, lifting equipment, telecommunications and other industries.

**OUR ENGINEERING.
YOUR SUCCESS.**

**Our skilled
engineering team
is your partner
for advanced
engineering
solutions.**

The experts in the Mosdorfer engineering department ensure that your product vision can technically be realized in the most economical and efficient way. They develop tailor-made solutions according to your specific product requirements.

The Mosdorfer team of experts knows how to deal with challenging engineering tasks. In close interaction with you as our customer we together define the dimensioning of your finished product. The knowledge and experience of our engineers is supported by

the latest computer software and simulation programs. Our various technical possibilities guarantee benefits in terms of short response times, optimised logistics and complete solutions from one partner without delays.

OUR FORGING. YOUR SUCCESS.

Profound expertise
linked with long-term
experience in hot metal
forming technology
makes us your strategic
partner. We forge for
your success.

On our state-of-the-art **forging lines** we realize your requirements regarding forged components and hot pressed parts with the highest precision. We machine alloy and non alloy steel as well as aluminum in all forgeable qualities.

Also complex forging components can be formed precisely to satisfy customer requirements.

With our **in-house tool manufacturing** we are perfectly prepared for your individual needs and demands. It gives us the necessary flexibility to quickly react and economically fulfill the requirements for the manufacturing of your products. From the geometry

of your part, we machine the most efficient forging tool on our state-of-the-art CNC and HSC production centers. Consequently, we guarantee short through-put times and high productivity.

We have a modern **in-house heat treatment plant**. The required quality and properties of the steel or aluminum blanks are achieved through controlled thermal heat treatment processes.

OUR MANUFACTURING. YOUR SUCCESS.

**With our
machining and
hot dip galvanizing
technology we
ensure the high-
quality finishing
of your components
and products.**

The final manufacturing of the high-quality precision forged components rounds-off our extensive range of services. Therefore our manufacturing centers in Weiz, Austria and Myjava, Slovakia - together more than 17,000 m² - are perfectly equipped for precise machining according to your specifications.

Our knowledge and experience make us your perfect partner for manufacturing and finishing all metallic materials.

Our range of services includes turning, milling, sawing, gear cutting, grinding, welding, gas and plasma cutting on CNC machines as well as assembly. For the perfect finishing and high-durability of your products, we offer the highest standards in our in-house hot dip galvanizing center. For critical parts we achieve the highest level of precision through the centrifugal galvanizing process.

Our network of reliable partners complements our services in the field of die-cast aluminum, gravity die casting, sand casting and polymer moulding technology. Your demands, define our customized final manufacturing process.

OUR PRECISION. YOUR SUCCESS.

We focus on quality and precision with the full dedication, commitment and teamwork of all employees. Meeting and exceeding your expectations is our dedicated aim.

All our products and facilities meet the legal requirements, directives and standards as well as the parameters additionally specified by the customer.

We provide excellent customer service and continuous improvement in the development, realization and delivery of our products and services.

The quality standard ISO 9001 is the standard according to which all our locations are certified and is the supporting tool for enabling the presentation and development of the business processes.

We use our resources with thought, and treat our environment with care. Creating a business environment with high safety standards is a matter of course for us. We are ISO 14001 and OHSAS 18001 compliant.
